

Maya Shankar

Final Year CSE Student
756/1 Khairakpatti, Bhattagaon, Jhasni-284127
Mob No.: 7404551195 | Email Id: mayashankarx@gmail.com

CAREER OBJECTIVE

Motivated and detail-oriented Computer Science undergraduate currently in the third year, with a strong interest in software development and problem-solving. Actively building practical skills through academic and personal projects. Seeking an internship opportunity to apply foundational programming knowledge, contribute to real-world projects, and grow as a software professional.

ACADEMIC QUALIFICATION

S.No.	Qualification	University / Board	Year	Per %
1	10 th	CBSE	2021	82
2	12 th	CBSE	2023	62

WORK EXPERIENCE

- Team coordination in SIH nationals event
- Team coordination with team in hackathons
- Team bonding with project team during classes

PROJECT

- Tittle 1: Lane Detection and Lane Departure Warning System

Description: This project focuses on designing and implementing a lane detection and lane departure warning system using computer vision techniques. The system uses image processing algorithms to detect edges, identify lane lines, and determine the vehicle's position. The goal is to develop a reliable and efficient system that can assist drivers in maintaining lane discipline and improving road safety.

- Tittle 2 : Spam detection

Description: "In an era of increasing digital communication, unwanted messages have become a significant security flaw exploited for fraudulent activities. This project focuses on developing an efficient spam detection system that automates the classification of spam and non-spam messages. The system analyzes textual content for deceptive indicators—such as suspicious URLs, excessive capitalization, and specific keywords—to categorize messages, offering a reliable solution to protect user privacy and enhance productivity."

- Title 3: AI Chatbot clone

Description: An AI chatbot clone is an intelligent conversational application that uses large language models to understand user queries, generate human-like responses, maintain conversation history, and provide real-time assistance. It supports natural language interactions, context-aware communication, and delivers accurate, engaging, and personalized responses across various domains and use cases.

- Title 4: Prompt Tester app

Description: The Prompt Tester App is a smart web-based application designed to help users create, test, and refine prompts for AI models efficiently. With the rapid growth of AI tools, the quality of prompts plays a crucial role in obtaining accurate and meaningful responses. This project focuses on simplifying that process by providing an interactive environment where users can experiment with different prompts and instantly evaluate their outputs.

- Title 5: Medagent (Application for hassle free online appointment.)

Description: MedAgent is a healthcare-based web application designed to simplify the process of booking medical consultations and doctor appointments. The platform provides users with a convenient and efficient way to connect with healthcare professionals without the need for long waiting times or physical visits for basic scheduling. The application allows users to browse available doctors, view their specializations, and book appointments based on preferred time slots. It also enables users to schedule online consultations, making healthcare more accessible, especially for those in remote areas or with busy schedules.

STRENGTHS

- Quick learner with strong adaptability
- Problem-solving mindset and logical thinking
- Good communication and teamwork skills

TECHNICAL SKILLS

- Programming: C/ Python (basic understanding, currently learning)
- Web Development: HTML, CSS (beginner)
- Tools: VS Code, Git (basic), RAG
- Concepts: Problem-solving, basic programming logic
- Currently Learning: Data Structures and Algorithms

PERSONAL INFORMATION

- **Professional Skills:** Leadership, Teamwork, Adaptability.
- **Languages:** English, Hindi, German (Learning)
- **Hobbies & Interests:** Basketball, Volleyball.
